#### TCRP B-43 USE OF WEB-BASED CUSTOMER FEEDBACK TO IMPROVE PUBLIC TRANSIT SERVICES

FTA Regional Conference May 14, 2015

Dr. Kari Edison Watkins, PE, PhD Assistant Professor, Georgia Tech

# **Toolkit Outline**

- Summary
- Part 1:
  - Ch. 1-1 Understanding Web-based Feedback
  - Ch. 1-2 Managing Web-based Feedback
  - Ch. 1-3 Web-based Feedback Tools
  - Ch. 1-4 Case Study Summaries
  - Ch. 1-5 Lessons Learned and Future Research
- Part 2: Web-based Feedback Tool Selection Guide
  - Ch. 2-1 Categories of Web-based Feedback
  - Ch. 2-2 Tool Types and Features
  - Ch. 2-3 How to Use the Tool Selection Guide
  - Ch. 2-4 Tool Selection Guide

#### Appendices

# Defining Customer Feedback

#### • Feedback is:

- Any communication generated by transit users and other members of the public and directed at the transit agency
- Listening to and reacting to input from customers and other stakeholders

#### Unsolicited feedback is:

- Comments and complaints that flow into the agency without being directly requested by agency staff
- Solicited feedback is:
  - Initiated by the agency to address specific needs or issues

## The Customer Perspective

| BENEFITS                       | CHALLENGES               |
|--------------------------------|--------------------------|
| Real-time feedback             | Equity and accessibility |
| Safety and security            | Public acceptance        |
| Increased public participation | Privacy concerns         |
| Reduced call center wait times | Lack of personal contact |
| Enhanced agency image          |                          |

# The Agency Perspective

| BENEFITS                                      | CHALLENGES                                           |
|-----------------------------------------------|------------------------------------------------------|
| Cost effectiveness                            | Negative feedback                                    |
| Increased outreach and documentation of needs | Loss of direct, personal two-<br>way communication   |
| Lists of interested future participants       | Need for internal processes, policies, and protocols |
| Interagency communication and coordination    | Resource requirements                                |
| Reporting                                     | Need to manage public expectations                   |
| Rider retention                               | How to measure impacts                               |

0

# **Case Studies**

- Transit Agencies
  - Charlotte Area Transit System
  - CT Transit
  - Denton County Transportation Authority
  - Los Angeles Metro
  - MBTA Transit Police
  - TriMet
  - Transit communications professionals

- Non-transit
   Organizations
  - Amtrak
  - City of New Haven
  - Software developers
  - Transit customers and advocates

# Why Use Web-based Feedback?

| COLLECT UNSOLICITED COMMENTS                                                                                                       | ACTIVELY SOLICIT COMMENTS                                                                        |
|------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| <ul> <li>Time-sensitive issues</li> <li>Ongoing concerns and commendations</li> </ul>                                              | <ul> <li>Policy and planning activities</li> <li>Public opinion polling</li> </ul>               |
| ENCOURAGE CIVIC ENGAGEMENT                                                                                                         | MANAGE FEEDBACK                                                                                  |

# **Defining Features**

- User identification
- Visibility of comments
- Dialog
- Immediacy
- Geography-based
- Level of support needed
- Cost to agency

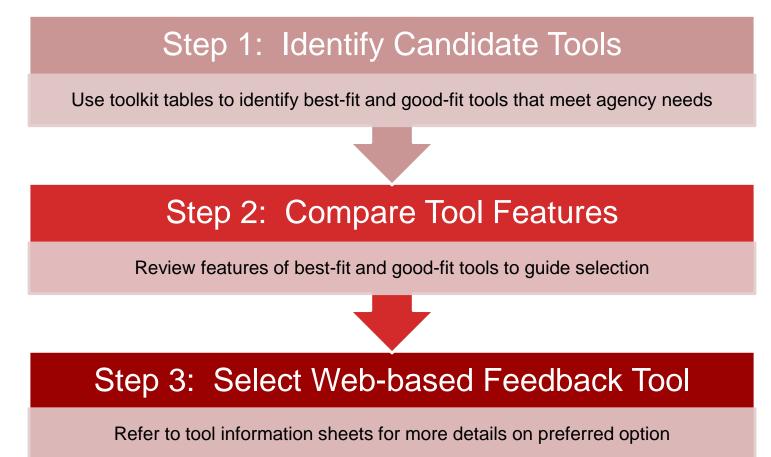

# **Application-specific Features**

- Customization
- Market penetration
- Control of data
- Training and support
- Accessibility
- Translation services
- Mobile photography

- Reporting functionality
- Ranking and prioritization
- Data processing
- Custom automated and personalized responses

## **Tool Selection Process**

# Step 1: Identify Candidate Tools

Best-fit and good-fit tools for collecting time-sensitive or ongoing unsolicited comments

Table 1 Best-Fit Tools for Agency Need: Collect Unsolicited Comments

|     | Type of Tool                               | Time-<br>Sensitive | Ongoing |
|-----|--------------------------------------------|--------------------|---------|
| 1.1 | Customer Information Mobile<br>Application | +                  | +       |
| 1.2 | Security-Related Mobile Application        | ++                 | +       |
| 1.3 | Community Issues                           | +                  | ++      |
| 1.4 | Web-Based Forms                            |                    | ++      |
| 1.5 | Social Media                               | ++                 | ++      |
| 2.1 | Idea Management                            |                    | +       |
| ++  | Designates Best-Fit Tools + Designates     | signates Good-Fit  | Tools   |

# Step 2: Compare Tool Features

# Features for best-fit and good-fit tools based category and subcategory of agency need

Table 5 Tool Features for Agency Need: Collect Unsolicited Comments – Time Sensitive

| Tool Number               | 1.1                                   | 1.2                                | 1.3                 | 1.5                |
|---------------------------|---------------------------------------|------------------------------------|---------------------|--------------------|
| Type of Tool              | Customer<br>Information<br>Mobile App | Security-<br>Related<br>Mobile App | Community<br>Issues | Social Media       |
| Best-Fit:                 | +                                     | ++                                 | +                   | ++                 |
| Features:                 |                                       |                                    |                     |                    |
| User Identification       | Anonymous                             | Optional                           | Optional            | Minimal            |
| Visibility of<br>Comments |                                       | Private                            | Agency Option       | Optional           |
| Dialog                    | No                                    | Yes                                | Yes                 | Yes                |
| Immediacy                 | No                                    | Yes                                | No                  | Yes                |
| Geography-Based           | Geo-referenced                        | Geo-<br>referenced                 | Geo-<br>referenced  | Geo-<br>referenced |
| Support Needed            | Tech Support                          | Tech Support                       | Set-up needed       | Min Support        |
| Cost                      | Paid                                  | Paid                               | Freemium            | Free               |

#### Step 3: Select Best-Fit Tool

| 1.5 Social Media                                                                                                                                                                                                                                         |                                                                                                                                                                                                              | Issue Reporting                                                |                                                                              |  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------|------------------------------------------------------------------------------|--|
| Description: A series of interactive online applications that encourage users to interact with one<br>another, create content, and share information.                                                                                                    |                                                                                                                                                                                                              |                                                                |                                                                              |  |
|                                                                                                                                                                                                                                                          | comments, photos, and/or v<br>ce or rude operators, broken<br>nents.                                                                                                                                         |                                                                |                                                                              |  |
| Advantages                                                                                                                                                                                                                                               |                                                                                                                                                                                                              | Disadvantages                                                  |                                                                              |  |
|                                                                                                                                                                                                                                                          | eady using social media tools tions and can easily participate.                                                                                                                                              |                                                                | may limit the length of posts<br>ich may make it difficult to<br>n incident. |  |
| The widespread use of social media on mobile devices<br>makes it easy for riders to share feedback about transit<br>conditions in real time so that agencies can respond<br>quickly to time-sensitive issues.                                            |                                                                                                                                                                                                              |                                                                |                                                                              |  |
| Social media channels make it easy for individuals to                                                                                                                                                                                                    |                                                                                                                                                                                                              | dicated to responding and<br>a could be resource intensive for |                                                                              |  |

- Description
- Uses
- Advantages / Disadvantages
- Features
- Notes
- Addressed needs

## Lessons Learned

- One size does not fit all
- People want to be acknowledged
- Accentuate the positive
- Manage expectations
- Look before you leap
- Use customer feedback to educate

- Measure your success
- Build stakeholder support
- Web-based tools may save money
- Integrate new and old systems
- Working with vendors
- Maintain a level playing field

### **Future Research**

- Identifying metrics
- Standardized feedback categories
- Understanding rider access to technology

## Thank You!
