

FHWA Climate Change Vulnerability Assessment Pilots: *Lessons Learned*

**Getting on the Right Track: Real-World Approaches to
Climate Change Adaptation**

March 22, 2012

**U.S. Department of Transportation
Federal Highway Administration**

Pilot Program Goals

- Help DOTs and MPOs more quickly advance existing adaptation assessment activities
- Assist FHWA in test driving our climate change vulnerability and risk assessment framework

Climate Change Vulnerability and Risk Assessment Pilot Locations

WASHINGTON

San Francisco
CALIFORNIA

Oahu
HAWAII

Central &
Coastal

NEW JERSEY

Hampton Roads
VIRGINIA

Pilot: Metropolitan Transportation Commission

- Focused on a portion of San Francisco Bay
- Sea level rise only
- Looked at subset of road, transit, facility, and ped/bike assets
- Created “asset risk profiles”
- Explored potential near term and long term adaptation strategies
- Next Steps:
 - Communicate findings
 - Further Analysis, more detailed adaptation planning
 - Move toward implementation

Asset Risk Profile

Coliseum / Oakland Airport BART Station (T-04)

Asset Location / Jurisdiction
Oakland / BART

Summary

The Coliseum / Oakland Airport BART Station is a transit facility serving East Oakland neighborhoods and includes bus transfer and parking facilities. Pedestrian connections are available to Oakland Coliseum Amtrak Station, and frequent and direct bus service is provided from the BART station to Oakland International Airport. The future Oakland Airport BART Connector, currently under construction, will provide an automated guideway transit connection between the station and the airport. Due to lack of data, this asset was not rated with respect to sensitivity. Exposure is rated low, due to inundation under only 100-year SWEL + wind waves for both the 16" and 55" SLR scenarios. No adequate alternative station exists for the Coliseum / Oakland Airport BART Station, resulting in a medium vulnerability rating. Consequence is rated high for capital improvement costs, commuter use, and socioeconomic impact; moderate for time to rebuild; and low for public safety and goods movement, which does not apply. The overall consequence rating is 3.33, making this a medium-risk asset.

Characteristics:

- Elevated
- Commuter route
- Transit routes [3 BART Lines; AC Transit: 45, 46, 73, 98, 356, 805]

Sensitivity

Data unavailable in project timeframe.

Liquefaction Susceptibility Medium

Exposure: Low

Maximum Inundation Depths

16" + MHHW	0 ft
16" + 100-yr SWEL	0 ft
16" + 100-yr SWEL + wind waves	YES
55" + MHHW	0 ft
55" + 100-yr SWEL	0 ft*
55" + 100-yr SWEL + wind waves	YES

Inadequate Adaptive Capacity (16" SLR): High
No adequate alternative station

Vulnerability Rating (mid century): Medium

*The asset is inundated to 0.3 ft at 55" + 100-yr SWEL SLR scenario, which was rounded down to 0 ft due to resolution limitations of the mapping

Projected Inundation with 16 inch SLR + 100-yr SWEL

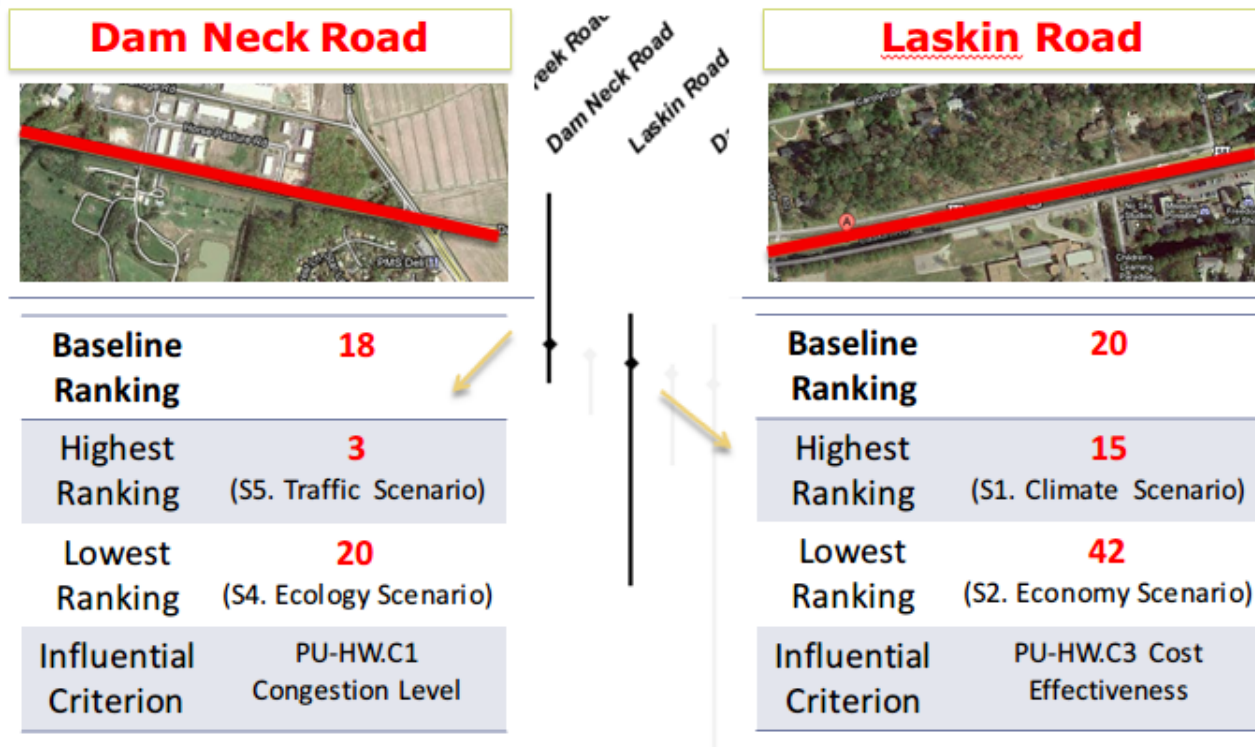

Projected Inundation with 55 inch SLR + 100-yr SWEL

Pilot: Virginia DOT –Hampton Roads

- Developed a priority setting model
- For use in transportation planning
- Multicriteria analysis included climate change impact scenarios
- Model is available for use by other regions
- Results being used by Hampton Roads PDC as they update their transportation plan.

Pilot: Oahu MPO

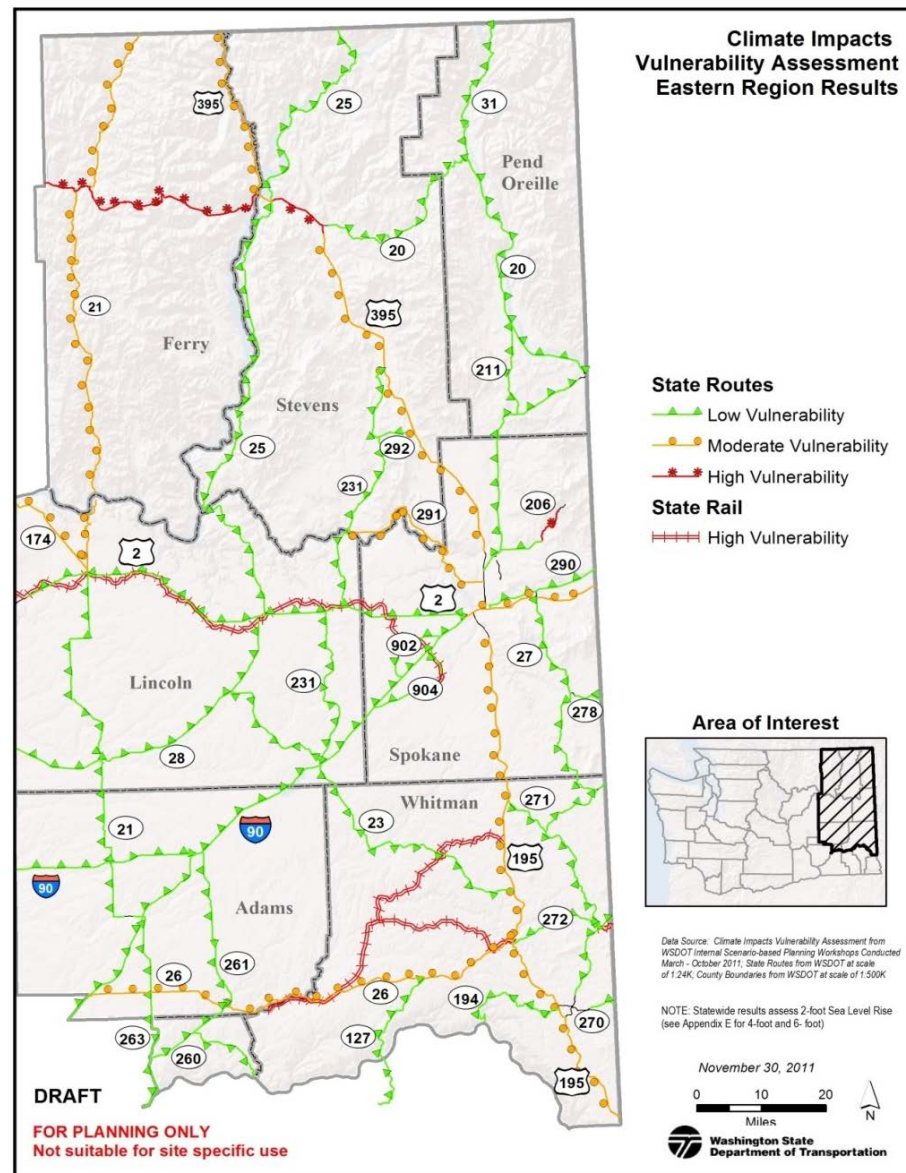

Asset	Overall Value	Impact to Society from:		
		Storm Surge	Sea Level Rise	Heavy Rain/Storm Events
Honolulu Harbor		Moderate	Low	Low
Honolulu International Airport				
<i>TheBus</i> (811 Middle Street)	High	Low	Low	Low
<i>Oahu Baseyard</i> (727 Kakoi Street)	Low	Low	High	Low
<i>Honolulu International Airport and Access</i>	High	High	Low	Low
Kalaeloa/Barbers Point				
<i>Kalaeloa Airport</i>	Low	Low	High	Low
<i>Campbell Industrial Park</i>	High	High	Low	Low
<i>Kalaeloa Barbers Point Harbor</i>	High	High	Low	Low
Three Waikiki Bridges	Moderate	High	High	Low
Farrington Highway on Waianae Coast	High	High	High	Low

- Held 2 day interagency workshop to select assets for further study
- Performed qualitative risk assessment on each asset
- Low budget
- Emergency management and interagency collaboration focus

Pilot: Washington State DOT

- Statewide geographic scope
- Studied WSDOT owned and managed facilities
- Workshops covering the state.
 - “What keeps you up at night?”
- Putting information in one comprehensive, searchable format.
- Next Steps:
 - Develop a focused strategy to define how the agency will incorporate results
 - Further analysis
 - Communicating Internally and Externally

Lessons Learned

- **These studies can take a lot of time!**
 - Allocate more than one year
 - Assume at least a half an FTE for the study time period
- **Define study objectives and scope up front**
 - Who is the target audience? What products are needed? What level of detail is required?
 - Select and characterize relevant assets- so you don't spend time collecting data on assets you aren't going to study
 - Identify climate impacts of concern, and identify thresholds for impacts.
- **There are multiple approaches**
 - Depending on specific objectives, geographies, available funding...

Lessons Learned

- **It's an iterative process**
 - Findings in one area influence data gathering or analysis in another.
 - Not linear step by step
- **Increased emphasis on vulnerability rather than criticality**
 - Political
 - Consider your objectives
- **Collecting data on assets was challenging**
 - Inconsistent availability
 - Piecing together networks, differing formats
- **Likelihood and risk challenges**

Lessons Learned - Messaging

- **Focus on extreme events now and those being more common in the future**
 - “What keeps you up at night?”
- **Focus on solutions and asset management**
 - Emphasize strategies that work rather than always “disaster”
- **Use maps and pictures to share results**

Thank you
