| Description | FWSO Inspectors inspected SafeTrack operations at the Takoma and Silver Spring station platforms during this fourth day of Surge #6 which is a continuous single tracking segment between the stations. The schedule calls for single tracking from August 1st thru July 7th. Observations from the Takoma Station platform; SafeTrack signage was visible inside the station and just outside the Station Managers kiosk describing the service interruptions and dates. WMATA personnel were on-site directing passengers to shuttle buses from Takoma station. Two MTPD Officers were seen inside and outside the station No Purple vested WMATA staff were seen directing passengers as they typically leave around 0930. College students were effective providing SafeTrack pamphlets to customers outside the station. Observations from the Silver Spring Station platform; At least two WMATA Supervisors assisted passengers around this newer Paul Sarbanes Transit Center. On Sunday, September 20, 2015, Metro opened the Paul S. Sarbanes Transit Center. This new transit center is located next to our Red Line Metrorail station and features more than 30 bus bays serving Metrobus, Montgomery County Ride-On, VanGo and the University of Maryland shuttle. No WMATA Ambassadors in purple vest were on-site during this period. Several MTPD Officers were seen policing the station Most times WMATA Operations staff were effective in directing passengers. College students were effective providing SafeTrack pamphlets to customers outside the station. | Number of Defects | 0 |

| Inspector in Charge – Name P. Shane Richardson | Inspection Team P. Shane Richardson | |

| | Extremely long wait times at Shady Grove Station for passengers due to track issues between Shady Grove and Twinbrook. 3 consecutive trains at Shady Grove were 45 minutes, 55 minutes, and 1 hour to arrive. This was due to having to clamp interlocking at Twinbrook to run trains after losing IDW. WMATA ROCC did not have a clear pattern of trains today, one would come to Shady Grove, and then two trains would come back to back. WMATA had plenty of personnel on scene at Safe track and was well organized at Twinbrook with several tablets and employees positioned properly to assist. | | |
|-----------------|---|---|--|
| Remedial Action | Recommend better planning by ROCC to keep from sending to many trains in one direct there was 3 trains going toward shady grove and nothing going back toward DC. There Passengers had to offload and then get on next train, at one point the same passengers | were a lot of trains going out of servi | |

| Description | predominantly a restricted access area due to walls on the field side of track 1. The walls make the removal of the ties difficult. WMATA is also replacing insulators under the third rail. They are currently out of stock on insulators so more have been placed on order for future work There are numerous roadway maintenance machines working in the area The Surge activities are considered to be on target for completion per the schedule This weekend the crews will work in the switch areas to replace ties as well as some switch work The track structure had some heat related movement due the disturbance of the ballast. The areas will be corrected during tamping operations | | | | | | | | | | | | Yes | | | |

| Description | Rail Joints – for elimination by welding during the surge Crossties – WMATA uses a method for determining tie replacement that uses percentages of replacement. There was approximately 1200 feet of ties that will undergo a 50% replacement. This means that for every four crossties, two will be replaced. There was approximately 900 feet of ties that will undergo a 75% percent replacement. This means that for every defective tie, there are three good ties. A general comment from the FWSO team is that the ties in the area that was physically inspected were in good condition. | | | | | | | | | | | No | | | | |

Form FTA-IR-1

| | | dama one. | Rail Anchors – noted were the anchors that were aged or under stress. There was evidence of bowing on eners – the majority of the fasteners had been replaced | | |
|-----------------|-----|-------------------------------|---|--|---|
| | | secur | ng previous activities. The few that were not properly red will be replaced during the surge. | | |
| | | targe | d Rail Expansion Joints – the jumper cables that will be eted for removal or replacement were noted | | |
| | | recen | er Boards – the cover boards through this section were ntly replaced as needed. The ones that should be aced or repaired were noted. | | |
| | | | st – notes were made on the sections of rail where st should be added. | | |
| | | SO did not ta track system | ake any exceptions to this section of track related to n. | | |

| Description | At K1 CM604+90 a joint bar on the right rail had a broken bolt. A 35 mph manual speed restriction was put in place from K1 CM600+00 to K1 CM610+00. The ERT was called to replace the bolt and C-Bonds. General Observations: Track Unit #626 was performing a pre-inspection of track #1 in preparation for a future Safe Track Surge. The list that was compiled included: Rail Joints – for elimination by welding during the surge Crossties – In this area the ratio was approximately 75% good ties to 25% ties to be replaced. A general commended Finding? Recommended Finding? Remedial Action Required? You have a support of track #1 in preparation for a future Safe Track Surge. The list that was compiled included: A gail Joints – for elimination by welding during the surge of Crossties – In this area the ratio was approximately 75% good ties to 25% ties to be replaced. A general commended Finding? Recommended Finding? Remedial Action Required? | | | | | | | | | | | | No | |

| Description | There | Additional track 1 ETS boxes were noted in the 20160812-WMATA-RPM-1 report. There has been a consistent observation on all track inspections of ETS boxes in a state of poor repair. Recommended Reinspection? Yes | | | | | | | | | | | | | | |
| | howe | is noted that some of the boxes have been repaired during Surge activities owever the general state of disrepair is a concern due to the Fire/Life/Safety spects of the functionality of these boxes. | | | | | | | | | | | | | | |
| Remedial Action | | WMATA needs to perform maintenance repairs when required on all ETS boxes. The condition of these boxes should be included as a part of the monthly testing protocols employed by the departments responsible for repair and maintenance of the ETS boxes. | | | | | | | | | | | | | | |

Inspector in Charge – Name

Medenia K. Dashiell

Medenia K. Dashiell

The FTA-WMATA Safety Protocol – August, 2016 specifically addresses areas of track inspection and/or investigations regarding Roadway Worker Protection (RWP) situations when a Roadway Worker In Charge (RWIC) or Subject Matter Expert (SME) may need to be required for those specific track inspection/investigations. It does not address station platform inspections/observations where the aforementioned personnel are not required. In addition it states "Inspections/investigations may be announced or unannounced."

FWSO then returned to my vehicle to retrieve my SmartCard and Federal Credentials then returned to the Station Manager's kiosk. I presented my credentials to and explained my credential granted me permission to conduct inspections in the performance of my duties as an FTA Inspector to conduct inspections from the station platform. FWSO was again denied access, citing that I would need a WMATA escort in order to conduct a platform inspection; therefore, I then used my SmartCard to gain access to the platform to conduct the inspection.

On July 5, 2016, myself and two other FWSO inspectors had previously noted the tie conditions while monitoring the Safe Track operations at Braddock Road Station (WMATA conducted Safe Track operations between Reagan National Airport to Braddock Road from July 5 to 11, 2016) from the station platform. Given that Safe Track had previously worked thru that area and the most recent WMATA derailment due to deteriorated ties and wide gate; I wanted to follow up to see if tie replacement had been performed in the area of the station platform as part of that Safe Track surge. No tie replacement had been conducted. I walked the entire station platform and noted several ties that were so deteriorated that ballast was pushing thru the top in addition to marginal lateral movement on the field side rail (closest to the platform). Observations of #2 track noted good tie conditions; a significant difference to #1 track.

Remedial Action

FWSO recommends that WMATA train/inform all required personnel on the FTA-WMATA Safety Protocol – August, 2016.

| Description | FWSO Inspectors observed Red Line Rail Operation Controllers as they managed train operations on the A-line from Shady Grove thru to the B-Line at Glenmont. Particular attention was given to compliance with the recently revised Permanent Order no. T-16-07; Introduction of 10 MPH Speed Restriction on Tracks where Workers are Present. The Order largely changes the maximum speed from 35 mph to 10 mph for Train Operators when in work areas and engaging Roadway workers. Inspection reports 20160817-WMATA-PSR-1 and 20160812-WMATA-RPM-1 both document excessive speeds for trains running through work areas. FWSO Inspectors recognized Rail Operations Controllers directing Train Operators to slow speeds to 10 mph on several occasions when engaging Roadway workers. FWSO Inspectors also saw evidence that WMATA was in compliance with the following Corrective Action Plan (CAP) findings. • FTA-Rail-1-4-A ROCC has a high level of noise and lack of electronic controls • FTA-Rail-1-4-C ROCC has a high level of noise and lack of electronic controls • FTA-Rail-1-7-A ROCC lacks formal procedures, manuals and checklists • FTA-Rail-1-6-A Radio Discipline is poor • FTA-Rail-1-6-B Radio Discipline is poor • FTA-Rail-1-6-B Radio Discipline is poor Inspectors heard evidence that proper radio repeat backs were made by the Rail Traffic Controllers for the vast majority on the communications. Proper radio protocol was heard from Train Operators as well. There was not a high level of noise in the ROCC during this period. Most of the communication between the ROCC Supervisors and Rail Traffic Controllers was conducted at a conversational level. | Number of Defects | 0 |

Remedial Action

United States Department of Transportation Federal Transit Administration

Each potential defective black was/must now be field verified by the TGV crew per the instructions of TGV management as of the start of the Safe Track initiative.

A total of 32 Narrow Gage conditions were cited. Four (4) confirmed Narrow Gage defects found were cited as black defects (below 56 inches and circled on the inspection report); and one (1) location was cited a red defect as follows:

• 553+40 – 55 13/16 – Black – field verified
• 557+22 – 55 13/16 – Black – field verified
• 558+72 – 55 13/16 – Black – field verified
• 561+95 – 55 13/16 – Black – field verified
• 568+54 – 55 15/16 – Red – field verified

WMATA management and ROCC were notified but the track was not taken out of service. Chase crew, PM 31 followed the test vehicle and immediately repaired the cited defects.

WMATA should review previous TGV inspection reports for this location to note the conditions of this area for historical significance.

| Description | FWSO conducted a cab riding follow up inspection/observation of the Red Line Safe Track locations from Gallery Place/Chinatown to Shady Grove with emphasis on the | Recommended Finding? | No |
| | segments between Cleveland Park to Grosvenor-Strathmore and Shady Grove to Twinbrook. FSWO noted the following: | Remedial Action Required? | Yes |
| | 10.15 – Tunnel lights – The tunnels lights in most cases were well illuminated, especially on the return on #1 track. Operators commented that it was very good and the need to use their high beams had lessened quite a bit; they appreciated the attention to the lighting within the tunnels. 8.7 – Vegetation Control 8.7.8 - Vegetation that is on or immediately adjacent to the track must be controlled so that it does not: (c) – Interfere with employees performing their duties. On #1 track at approximately chain marker A1 740+00 vegetation brushes the side of the rolling stock that could cause injury to the operator if their side window is opened on the train control side. On #2 track, ETS boxes appeared out of standard with lights out and damaged boxes; most boxes appeared to be the newer galvanized styled. | Recommended Re-inspection? | Yes |
| | #2 Track – In tunnel on the approach of Medical Center station (left side of track) a fire extinguisher appeared to be just set on the track walker's clearance platform; the extinguisher should be mounted at a specific location for easy excess in the case of an emergency. Cover boards missing at sporadic locations on both tracks. | | |
| Remedial Action | WMATA should immediately address the aforementioned conditions for the safety these conditions as warranted. | of their employees. FWSO will cont | inue to monitor |

|-----------------|--|---------------------------|----|
| | Springfield to Van Dorn Street stations and track which is scheduled to occurr from August 27th thru September 11th. The observations took place from the | Remedial Action Required? | No |
| | cab of Train with lead car #3213. This was not a track walking inspection. Below are a couple of observations; Several clusters new wood ties appear to be in place outside Track#2 along the track. Several sections of coverboard are missing and will need replacing. Noticed several ETS boxes that need repair because either the light was out or the box itself appeared to be open or possibly damaged. SafeTrack signage providing customers information on scheduled track outages was in place at the Franconia-Springfield station which is scheduled to start on Saturday, August 27 th . Train Operator encountered 4 track crew working on adjacent Track #1 and Track #2 between Van Dorn Street and Franconia-Springfield stations. Train Operator blew the horn twice and slowed his speed when encountering Track crew until receiving the proper hand signal from the crew to move thru. Track crews appeared to be checking the crossover section located just before the Franconia-Springfield station. | Recommended Reinspection? | No |
| Remedial Action | N/A | | |

| | At D1 CM569+50 the Station Marker (S) sign was knocked over on its side. Prior to a return to ATC control this should be repaired. (Photo) In the vicinity of D1 CM567+00 there is a need for ballast. The shoulder ballast appears to be in need of servicing as well. |
|-----------------|---|
| | WMATA should repair the following items: |
| Remedial Action | On the aerial structure from D1 CM548+00 to D1 CM558+00 there were five (5) locations where the distance between effective fasteners was greater than 120". As per TRST 1000 table 7-1 this condition is a Black Condition. The Track Supervisor used his discretion to implement a 10mph speed restriction through this area through the use of speed couplers. The track in this section is on an ascending grade and was tangent. There were no signs of rail movement and periodic gage measurement indicated that the track was within WMATA specifications. The ERT team responded to this area to make temporary repairs until emergency rights are implemented for repairs this evening. Noted four (4) gage rods with deteriorated ties in the vicinity of the block house on track #1 at New Carrollton. The ties were painted orange which indicates that they should be replaced during upcoming work activities. The insulator assembly at the end approach located at D1 CM525+00 was compromised and non-effective. Per TRST 1000, table 13-6 this is a RED condition. Track Unit 641 noted the condition. |

| Description | Crossties were in generally good condition. There were some noted areas where ballast will need to be added. Approximately 25% of the crossties will require replacement due to various defects. Crossover at B06: A visual inspection was made in the crossover from Track 1 up to the diamond. Spotty switch ties will require replacement in the area of the Switch 1A frog. All loose fasteners in the area of frog 1A will need to be tightened. The majority of the crossties are in good shape At Switch 1A, IJ, there is a 1/8" height difference between the trailing rail joint and the running surface. This should be corrected prior to the next surge. All track appliances were well lubricated All nuts and bolts appeared to be tight NOTE: It should be noted that all areas of concern of TRST responsible systems have been identified. There is no evidence present in the area that other departments | | | | | | | | | Yes | | | | | |

| Recommended Finding? No August 29, 2016 from Franconia-Springfield to Van Dorn Street Stations; however, both stations were closed for passenger rail service during the weekend. Rail passenger service began from the stations on August 29 th . In addition, free WMMATA bus shuttle service was available to transport Yellow Line passengers to Pentagon Station. Below are the findings: Job briefings were conducted for all WMATA maintenance and SAFE employees (see below) and a briefings desk, with the job work site displays, was set up on the mezzanine level. Trains arrive and terminate into Franconia-Springfield on #1 track and passengers were off and on boarded. FWSO noted only Blue Line train arrival/departures from this station. Trains arrived in most cases every 20 to 30 minutes; there were significant delays. Passengers complained that the WMATA website stated that there would be no service delays and that trains would operate every 24 minutes; however upon arrival to the station, they found significant and irregular delays in service. Purple vest employees were on hand to answer questions for bus and train operations. |
