Bus Rapid Transit and the American Community

Competition Results Summary

As the need for practical alternatives in mass transit grows, new ideas are emerging that redefine the role that buses can play. Bus Rapid Transit (BRT) is an alternative to rail, but it is more than simply special buses or improved bus services.

BRT is a complete rapid transit system that combines the quality of rail transit with the flexibility of buses. BRT utilizes intelligent transportation system technology, cleaner and quieter vehicles and integrated land use policy to provide new transportation options for communities at a fraction of the cost of light rail.

In 2001, WestStart hosted a BRT Design Competition composed of over 50 entrants, both professional and academic, from around the world. This Competition Results Summary illustrates **the top ideas resulting from this competition and highlights the implications of these designs for mass transit.** You will receive a book highlighting the winning entries, as well as a searchable CD-ROM with all entries.

AVAILABLE NOW: ORDER YOUR COPY TODAY!

Please complete this form to order your copy; only \$25 for both the book and the CD. Send order form and payment to: WestStart, 2181 E. Foothill Blvd., Pasadena, CA 91107 Attn: BRT Competition Results Summary. If order is from outside the United States, please add \$6 shipping and handling costs.
